Thesis title: (De)Legitimising Protest: Parliamentary Framing of Activism in Italy, 2018-2025

Name: Camilla Gazzola

Annotation & Frame Codebook

Annotation & Frame Codebook

This codebook documents the annotation scheme used across all stages of the pipeline: (A) binary speech classification, (B) activism-category assignment, and (C) frame identification. It is designed to ensure replicability and transparency.

Unit of analysis: individual parliamentary speech.

Annotations are applied at three levels: (1) relevance classification (Class 0/1), (2) activism category, (3) frame label. Theoretical foundations: McAdam's Political Process Model (1982) and Beetham's legitimacy framework (1991).

Part A - Speech Relevance Classification

A.1 Core Inclusion Criterion ('Outside-In' Rule)

A speech is coded Class 1 if and only if parliamentary debate centres on collective actors exerting political pressure from outside institutional channels. The focus must be on extra-institutional collective action oriented toward social change.

A.2 Exclusion Criteria

- Internal parliamentary activity (procedural debate, committee reports, votes)
- Individual grievances or personal cases not linked to collective mobilisation
- Routine labour disputes (strikes over pay or contracts not framed as political protest or collective mobilisation)
- Polysemous keywords in non-activist contexts (e.g. occupazione as 'employment')
- Institutional actors engaging in politics without sustained extra-institutional mobilisation

A.3 Classification Table

Code	Label	Decision Rule	Example
Class 1	Activism-related	Speech focuses on collective actors exerting pressure from outside institutional channels ('outside-in')	MPs debate the legitimacy of using roadblocks as a form of peaceful protest.

		criterion). Includes protests, strikes, roadblocks, social movements, CPR/prison revolts, student mobilisations.	
Class 0	Not activism-related	Speech contains an activism keyword but does not substantively address external collective action. Includes routine debate, individual grievances, administrative references, internal party activity.	MPs discuss the legal framework for labour contracts. Opposition MPs argued over budget amendments.

Ambiguous cases involving polysemous terms (rivolta, movimento, blocco) were oversampled in training (~30%) to improve classifier robustness. Where a speech contained only an incidental or unclear activism mention, it was coded Class 0.

Part B - Activism-Category Assignment

Each speech is assigned to one of 14 activism categories using a dictionary-based classifier with a priority hierarchy applied to full speech texts. This step classifies known protest referents, named movements, organisations, and activism types, rather than discovering unknown topics. See Appendix B for full keyword lists.

Speeches that do not match any activism-category keywords are coded as unassigned and excluded from topic-level and frame analysis (88 speeches). Topic assignment operates on full speech texts. The sentence-level keyword windows described in Part C are extracted after topic assignment and are used only for frame analysis.

B.1 Category Definitions

Category	Priority	Definition
Climate Activists	Priority 1	Debates focused on environmental protest movements, including named organisations such as Ultima Generazione, Extinction Rebellion, and Fridays for Future, as well as actions

		such as roadblocks, property damage, and climate demonstrations.
Pro-Palestine	Priority 1	Debates focused on protests, demonstrations, and mobilisations in solidarity with Palestinians, including university occupations, marches, and related activism in Italy.
No Vax	Priority 1	Debates focused on anti-vaccination protests and mobilisations, including demonstrations against COVID-19 restrictions and vaccine mandates.
Antisemitism	Priority 1	Debates focused on antisemitic protests, mobilisation, hate speech, and related counter-mobilisations, including commemorative and antifascist responses.
LGBTQ	Priority 1	Debates focused on LGBTQ rights activism, Pride events, and related mobilisations.
No TAV	Priority 1	Debates focused on the No TAV movement opposing high-speed rail infrastructure in the Susa Valley.
Migrants	Priority 2	Debates focused on migrant rights activism, solidarity movements, and protests related to migration policy, detention conditions, and border enforcement.
Incarcerated Persons	Priority 2	Debates focused on prison revolts, protests in CPRs (detention centres), hunger strikes, and activism connected to incarceration conditions, including the 41-bis regime.
Far Right	Priority 2	Debates focused on far-right movements, organisations, and mobilisations, including neo-fascist groups, CasaPound, and related violent incidents.
Far Left	Priority 2	Debates focused on far-left movements, anarchist groups, and related mobilisations or violent incidents.
Antifascist	Priority 2	Debates focused on antifascist activism, counter-mobilisations, and commemorative events.
Police / Security	Priority 3	Debates focused on protests related to police conduct, accountability, and security policy, including demonstrations against police violence.

Labour	Priority 3	Debates focused on labour activism, strikes framed as political protest, and trade union mobilisations oriented toward social or political change.
Students	Priority 3	Debates focused on student protests, university occupations, and youth mobilisations.

Priority 1 categories take precedence over Priority 2, which takes precedence over Priority 3, regardless of keyword frequency. Within the same priority level, the category with the highest keyword count is selected.

Part C - Frame Identification

Frame analysis follows the 'story grammar' approach (Caiani and della Porta 2011), decomposing discourse into subject-action-object relations. Two methods are applied to sentence-level keyword windows (1 sentence either side of activism keyword):

Step 1 - Keyness analysis (primary): Identifies partisan vocabulary through a log2 relative term frequency ratio applied to UDPipe-lemmatised windows. Minimum frequency threshold: $n \geq 2$ lemma occurrences; minimum $n \geq 5$ speeches per party-topic cell. Top 15 lemmas per party-topic cell are qualitatively mapped onto the six theoretical frames below.

Step 2 - STM (triangulation): Structural Topic Modelling is run separately for each activism category ($n \geq 30$ speeches) with party affiliation as a prevalence covariate, confirming that latent thematic clusters broadly align with keyness-derived frame patterns. Full results reported in Appendix D.

C.1 Six Macro-Frame Codebook

Frame	Definition	Indicative Lemmas (IT)	Theoretical Basis
Security	Framing activism as a threat to public order, national stability, or state authority. Justifies extraordinary	sicurezza, ordine pubblico, minaccia, pericolo, rischio, emergenza, prevenzione, controllo, protezione, violenza, disordine, blocco, confine	Buzan et al. (1998); Vultee (2010)

	measures by invoking urgency and danger.		
Legality	Framing activism in relation to legal validity, either to legitimise it (as constitutionally protected) or delegitimise it (as criminal).	legge, decreto, norma, diritto, costituzione, costituzionale, reato, sanzione, illecito, legalità, libertà, autorizzazione, garanzia	Lim (2013)
Morality	Transforming activism into a moral issue, evaluating it against shared societal values. Can legitimise or delegitimise.	responsabilità, dovere, valori, dignità, vergogna, coscienza, giustizia, ingiustizia, indignazione, rispetto, colpa, solidarietà	Rozin (1999)
National Identity	Constructing activists as external to the national community, framing dissent as an attack on Italian identity.	nazione, patria, italiani, identità, sovranità, confine, territorio, tradizione, cultura, straniero, popolo, comunità nazionale	Caiani & Della Porta (2011)
Humanitarianism	Centring suffering and compassion. Typically used to legitimise activism by emphasising the human cost of inaction or repression.	diritti umani, sofferenza, dignità umana, solidarietà, accoglienza, aiuto, protezione, vulnerabilità, vita, umanità, discriminazione, tutela	Fassin (2011)
Delegitimation	Severing the link between activism and	ideologia, ideologico, strumentalizzazione,	Beetham (1991)

	shared values by labelling it irrational, violent, or pathological.	propaganda, pretesto, falso, ipocrisia, irresponsabile, fanatismo, estremismo, radicalismo, demagogia, fazioso, ridicolo, assurdo, inutile, vergogna	
--	--	---	--

C.2 Frame Assignment Decision Rules

The top 15 distinctive lemmas per party-topic cell (from keyness analysis) are reviewed and mapped onto the six frames. When lemmas span multiple frames, the dominant lexical cluster determines the primary frame assignment. The interpretive step is acknowledged as analytical subjectivity in the limitations section.

Known ambiguities:

- Legality can legitimise or delegitimise depending on articulation; note direction when mapping.
- Morality and Humanitarianism frequently co-occur; assign primary frame based on dominant rhetorical strategy.
- Police/security and incarcerated persons can overlap in CPR debates; assign based on primary subject.
- Delegitimation directed at the state rather than activists should be noted as counter-framing.

D - Annotation and Coding Limitations

Binary classifier: The training sample (~1,600 speeches) was annotated by a single analyst following the outside-in criterion. Formal inter-coder reliability was not calculated. Ambiguous polysemous cases (rivolta, movimento, blocco) were oversampled to improve performance on borderline cases. A different analyst applying the same criteria may have produced a partially different training set, which could affect classifier performance.

Frame coding: Frame mapping was conducted by a single analyst. Formal inter-coder reliability was not calculated; a different analyst might draw frame boundaries differently, particularly where party vocabulary spans multiple frames or where the same frame serves

opposing purposes. Coding decisions are documented through explicit decision rules to enable replication. As frame mapping is inherently qualitative, results should be understood as interpretive.
